

Why Organizations Choose FaceKey Products

In today's fast-paced security landscape, organizations cannot afford to rely on outdated, easily compromised security measures. Traditional card-based access systems leave companies vulnerable to lost, stolen, or shared credentials, resulting in high administrative costs and security gaps.

Organizations, integrators, and OEM partners worldwide trust **FaceKey** to solve these challenges. By verifying *identity* rather than mere *possession*, FaceKey delivers a rare combination of cutting-edge biometrics, U.S.-based engineering, and a predictable, no-hidden-fee business model.

Here is a comprehensive look at why organizations consistently choose FaceKey products to protect their people, property, and data.

The Core Advantage: Security, Value, & Reliability

1. Security Over Possession

Traditional access cards can be lost, shared, stolen, or borrowed. FaceKey eliminates credential management entirely by using biometric verification. This ensures that the person at the door is precisely who they claim to be, making identity verification non-negotiable.

2. The FaceKey Difference

Unlike competitors, FaceKey offers a distinct four-fold promise:

- **No annual fees**
- **Real human support** (no outsourced call centers or automated bots)
- **U.S.-based engineering**
- **Proven reliability** in the most demanding environments

3. A Highly Valued No-Fee Model

Budgeting is predictable with FaceKey. We do not charge annual, renewal, or per-user fees. This eliminates the long-term cost creep commonly associated with subscription-based access control systems, allowing organizations to maximize their return on investment.

4. Low-Risk, Long-Term Deployments

FaceKey is a stable, U.S.-based company with decades of experience, consistent product lines, and a reputation for supporting customers long after the initial installation.

Operational Efficiency & Cost Reduction

5. Significant Cost Savings

By moving away from physical badges, organizations completely eliminate the ongoing operational costs of:

- Card printing and replacement
- Badge management and credential administration
- IT and security support calls caused by lost or malfunctioning cards
- Extra cabling in many retrofit scenarios
- Scalability efficiency – no panels required.

6. Elimination of "Buddy Punching"

When used for time and attendance, FaceKey's biometric verification ensures 100% accurate payroll data. By stopping employees from clocking in for one another, FaceKey saves organizations thousands of dollars every year.

7. Built for High-Throughput & Real-World Conditions

Engineered for real-world environments, FaceKey's facial recognition technology authenticates users in **under one second**. The system seamlessly adapts to changing lighting conditions and variations in user appearance, including hats, glasses, facial hair, and movement.

Engineered for Partners, Integrators, & IT Teams

8. Built with Integrators in Mind

Security integrators choose FaceKey because our systems are designed for seamless deployment. Integrators benefit from:

- Predictable, straightforward installations
- Clear documentation
- Readers that retrofit into existing systems without major rewiring
- Fast access to real, knowledgeable technicians—meaning fewer support calls and less downtime

9. A Trusted Partner for OEM Manufacturers

FaceKey provides highly stable biometric modules and Software Development Kits (SDKs) that are easy to integrate and backed by long-term support. OEMs get a proven, enterprise-grade biometric engine without the massive expense of building one from scratch. (FaceKey supplies face recognition to Diebold Nixdorf's EVAII product for over 10 years.)

10. Enterprise-Grade Security and IT Compliance

IT and security teams prefer FaceKey because our systems minimize network complexity while maximizing security. FaceKey biometric templates are **encrypted and non-reversible**, ensuring secure data handling and robust protection in financial institutions, vaults, and government facilities.

Specialized Enterprise Solutions

11. Seamless Scalability for Multi-Site Organizations

FaceKey scales effortlessly to support large user populations. It provides consistent, centralized identity verification across multiple locations, making it a powerful choice for growing enterprises.

12. Industrial and Food Manufacturing Compliance

In environments requiring strict compliance, high accountability, and reliable audit trails, physical cards and shared keypads present a hygiene and security risk. FaceKey delivers fast, contactless throughput while maintaining flawless compliance records.

13. Bulletproof Emergency Muster Systems

During emergencies, accuracy saves lives. FaceKey's biometric muster systems ensure precise missing person reports and real-time roll calls. There is no guessing, no manual checklists, and no reliance on physical badges that employees might leave behind during an evacuation.

Experience the FaceKey Difference

Ready to elevate your security, eliminate recurring subscription fees, and implement a biometric solution you can trust for the long haul?

Contact the FaceKey Team Today to discuss your project or request a product demonstration.
